## Energy Skills Partnership (ESP) - Scottish Installers Skills Matrix

An installer skills matrix for Energy Efficiency Measures (EEMs) has been developed for Scotland in support of the British Standards Institution (BSI) Publicly Available Specification (PAS) 2030 for installer retrofit standards.

From the launch of the 'Energy Efficient Scotland' route map in 2018, to the 'Installers Skills Matrix' in 2022, **Energy Skills Partnership (ESP)** have worked with the construction, heating and electrical trade bodies alongside Scottish colleges to identify and assess the current and future energy efficiency skills needs for Scotland. This research has brought together national policy with industry forecasts, to assess these needs and capacity, to achieve the aims of a zero carbon Scotland. This mapping technique will hopefully be used elsewhere in the UK to drive forward high-quality training and appropriate skills for a low carbon future.
